

there are six female goldfish for every 10 male goldfish in the aquarium at the office there are 216 female goldfish in the aquarium how many male goldfish are in the aquarium.

Answer:

60 males in the aquarium

Step-by-step explanation:

It is a ratio problem. The ratio of female goldfish to male goldfish is 6:10. If you divide 216 (females) by 6 (females), you get 36. If you multiply 10 times 6, you get 60. So, the ratio turns into 216: 60. So, there are 60 males in the aquarium.

Consider what happens when you push both a pin and the blunt end of a pen against your skin with the same force. What will determine whether your skin will be punctured?

On his first night aboard the Portuguese ship, what does Gulliver plan to do while the crew is eating? 1) escape from the ship
